Tables and Figures in LaTeX

Vikram Mehra

November 11, 2026

1 Introduction

LaTeX provides environments for creating professional tables and inserting figures into documents.

The tabular environment is used to arrange information in rows and columns. The graphicx package is used to insert external images.

2 Creating a Basic Table

The following table demonstrates column alignment and horizontal borders.

Roll Number	Student Name	Marks
101	Student A	85
102	Student B	90
103	Student C	88

3 Table with Caption and Label

Tables can be placed inside the table environment. The caption describes the table, while the label allows us to refer to it elsewhere.

Subject	Description	Marks
Mathematics	Algebra and Calculus	90
Physics	Mechanics and Optics	85
Computer Science	Programming	95

Table 1: Example of student subject marks

As shown in Table 1, LaTeX can automatically number tables and create references.

4 Combining Table Columns

The multicolumn command combines multiple columns.

Student Information		
Roll Number	Name	Grade
101	Student A	A
102	Student B	B

Table 2: Table using the multicolumn command

5 Inserting a Figure

The figure environment is used to insert and manage images in a document.

The following box is a placeholder for an image.

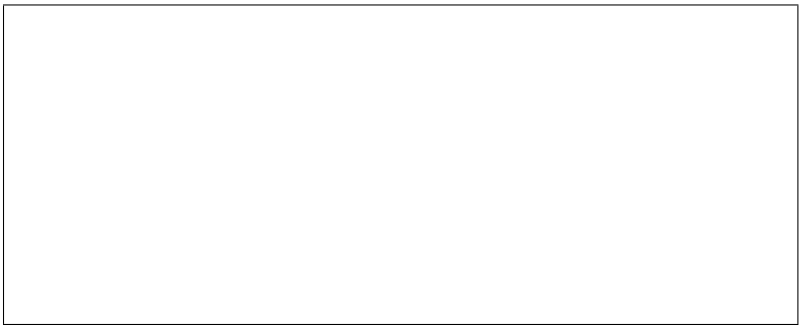

Figure 1: Placeholder for an example figure

Figure 1 demonstrates how to add a caption and reference to a figure.

6 Using the Includegraphics Command

To insert an actual image, first place an image file named sample-image.png in the same folder as this source file.

Then replace the placeholder figure above with:

7 Conclusion

This program demonstrates tables, column alignment, captions, labels, references, and figure insertion using LaTeX.
