Picture Environment in LaTeX

Vikram Mehra

November 11, 2026

1 Introduction

The picture environment is used to create simple drawings and diagrams directly in LaTeX.

It provides commands for drawing lines, vectors, circles, boxes, and other graphical elements.

2 Setting the Unit Length

The unit length determines the size of coordinates used inside the picture environment.

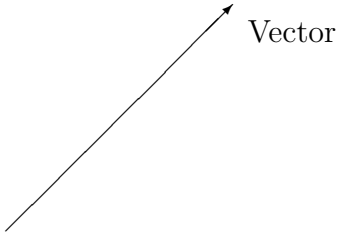

3 Drawing Lines

The line command draws a straight line.

4 Drawing Vectors

The vector command draws a line with an arrowhead.

5 Drawing Circles

The circle command draws an unfilled circle. The circle* command draws a filled circle.

Unfilled circle Filled circle

6 Drawing an Oval

The oval command creates an oval-shaped outline.

7 Drawing a Frame Box

The framebox command creates a rectangular box.

LaTeX Picture

8 Using the Makebox Command

The makebox command creates a box for positioning text inside the picture environment.

Technical Writing Lab

9 Drawing Repeated Objects

The multiput command repeats an object at regular coordinate intervals.

10 Conclusion

The picture environment provides basic drawing facilities in LaTeX. It is useful for simple diagrams, geometrical illustrations, and labelled drawings.
